Breeders views on Eudon's daughters

▶ **VITTORIA PESSINA (25 Eudon daus. in the herd):** «Our Eudon are performing very well in production... they are also very good for health and fertility. The majority of the 14 first calvers were pregnant at first or maximum second insemination. On the health side, they are very normal cows that give you no problems».

▶ **LUCA PRANDINI (30 Eudon daus. in the herd):** «Eudon is a sire that we have used more and more because it was at the top for GPFT and for fertility. His daughters are very high producers, very calm with beautiful udders and perfect feet & legs».

▶ **ANGELO SCORSOLINI (8 Eudon daus. in the herd):** «Eudon is a sire that impresses me and that I will suggest to all my colleagues. His daughters are great producers with a great conformation that have no problems to get pregnant again».

▶ **CASCINA RIMBOSIO (6 Eudon daus. in the herd):** «Eudon is certainly a great sire for all who seek complete animals with production and functionality. His daughters in our herd are all sharing great production in quantity and quality and great conformation, especially in udders and feet & legs. All together they are also very uniform».

The specialist on type and udder

Eudon daughters are very balanced and show great strength. Their conformation is correct on the top line and rump with very deep chest. Legs are functional and sound while feet and locomotion are great! Udders are what make this sire great.

In his daughters we find great rear attachments and a perfect insertion on the front, excellent ligament, well centered teats. Udder depth is simply exceptional.

Eudon is a source of balance, strength and durability. ■
